ALERT FOR DRUG USERS PREVENT HIV

New HIV
infections
are increasing among
people who
inject drugs

HIV AND DRUG USE

There is an increase in new HIV infections among people who inject drugs.

Injecting any drug, including snowblow and other head shop drugs is high risk for viruses such as HIV and Hepatitis.

Link with drug services in your area.

Get Tested!

The only way to know if you have HIV is to get tested.

UNSAFE INJECTING

- Always use clean & sterile equipment (needles, syringes, spoons, water, filters, etc.).
- Never share or re-use needles or equipment with another drug user, not even your partner.
- Get your own equipment from your local needle exchange.
- Always dispose of your needles and equipment safely.

SAFER SEX

The sexual transmission of HIV may be prevented by safer sex practices:

- Always use condoms correctly during sex.
- Remember to use a condom every time you have sex.
- Only use a condom once. Never ever reuse it!
- Condoms are available for free in all needle exchanges.
